SBA honors new BAHEP member – J&P Technologies

BAY AREA HOUSTON, TEXAS – J&P Technologies was established in 1997 to provide contract services for the development, assessment, and support of integrated flight systems, scientific computing, and complex control systems, specifically in the aerospace and biomedical industries.

BAHEP President Bob Mitchell noted, “J&P recently received the Small Business Administration’s 2010 Small Business Person of the Year award for the Houston District. That is indicative of the quality of service the company provides. We’re pleased to welcome J&P as a new member.”

J&P employs 30 engineers supporting two major contracts at NASA Johnson Space Center: Safety & Mission Assurance Support Services (SMASS) contract and the Facility Development & Operations Contract (FDOC). Areas of expertise include system engineering, software development, system integration & test, system safety & risk analysis, and software configuration management. Certifications include 8(a) BD / SDB [Native American Owned], Women’s Business Enterprise (WBE), and Texas Historically Underutilized Business (HUB).

Although J&P primarily serves the aerospace industry, the company is interested in serving other industries that could benefit from its system software and safety engineering services, such as the petrochemical and healthcare industries. Jennifer L. Lewis, J&P president, commented, “BAHEP has a great reputation in regard to its support of industry clusters throughout the region. We look forward to participating in its initiatives as well as networking with the other members.”

J&P Technologies is located at 2045 Space Park Drive, Suite 200, in Bay Area Houston. Call 281.333.0128 or visit www.jandptech.com for additional information.
